

RAPP/1 LTS: what it takes to lock the whole thing

RAPP/1 is the one LTS release people pull. Five phases lock it, in order, with the owner's decisions first.

in force

specified

experimental

candidate

open

proposed

own shape

Your decisions first · phase 1, Decide · you, about an hour

1. merge RAPP proposal 0001 (G18, kody-w/RAPP#119), a documentation fix only: it is yours because RAPP reserves constitution merges for the maintainer (Articles XXVIII.4 and XXX.2)
2. accept or refuse RAPP proposal 0002 (G19), Tier 2 loading: a draft on experimental/proposal-0002-tier2-parity
3. ratify the RAPP Work Constitution and its Part V (G8, G9)

RAPP/1 LTS is

- One LTS release of the whole stack: one estate release scope; its Grail pin never moves, and each release in it pins every component.
- Everything in it is in force, and nothing in it is experimental.
- Newer kernels get successor scopes, one per kernel. Experiments live only there until they graduate.

It pins: the LTS kernel brainstem-v0.6.9 rapp-hive/1 rapp-work/1 RAPP Workspace/1 rapp-work-sdk/1 rapp-registry/1.1 rapp-cicd/1 rapp-deploy/1 the agents and apps that ship with it

RAPP/1 §11.1: the pin is “a permanent compatibility anchor, not a moving release channel”; “A successor uses a new release_scope”. §13.3: one grail-kernel entry per scope, one per protocol. rapp-cicd/1 §2: a release lists every part.

Each layer, top to bottom: in RAPP/1, or what it needs to graduate

6 You	nothing to graduate	
5 Brainstem	6 to graduate	G17 G18 G19 G20 G23 RAR
4 Your device	7 to graduate	G2 G3 G4 G7 G13 G14 G22
3 Hive	6 to graduate	G1 G6 G8 G9 G12 Public copy
2 Organization	4 to graduate	G5 G10 G11 G16
1 Estate	1 to graduate	G15
0 RAPP/1	in RAPP/1	

2 · Zero drift, clean pull

- engineering
- fix RAPP's and RAR's non-conformant eggs, and RAR's bounded scan
- give rapp-model-hive's frames a trusted anchor
- re-sweep until every repo of the RAPP/1 stack is certified (the dogfood)
- keep the default pull clean: default branches and the LTS install carry only in-force parts; experiments stay on experimental branches or in newest
- one front door keeps the network unified and tracked; pin the Windows LTS install (G23)

G23

3 · Close the specification gaps

- spec owner
- rapp-hive/1 (G1, G6)
- rapp-work-sdk/1 (G2, G3, G4, G7, G11)
- rapp-work/1 (G5, G10); RAPP's Constitution and RAPP Workspace/1 (G22)
- a gap that cannot close in time waits for a later RAPP, with the owner's sign-off

G1 G2 G3 G4 G5 G6 G7 G10 G11 G22

4 · Switch it on

- estate owner
- sign the LTS scope's grail-kernel entry and a successor scope for the newest kernel (G15)
- sign the protocol pins; that switches on the Workspaces and RAR
- authorize a signer for network pulses, so each version verifies against the estate: the pulses (planned) track RAPP/1's health over time
- activate rapp-work/1 (G16): the Organization must be in force for RAPP/1 to be healthy throughout
- give the Brainstem an SDK agent (G17)

G15 G16 G17

5 · Graduate into RAPP/1

- engineering, through the rings
- graduate each newest part through the rings: Folder Hive, Hive copy and the Hive agent (G14), References (G13), Hub cards (G12), Public copy, the Brainstem app (G20)
- then Hive Mind, once an estate accepts rapp-federation/1, and the Release rings, once a graduation uses them
- merge what graduated; the rest stays out of what people pull
- tag the lock once the clean-pull check passes again; sweep for drift on a schedule

G12 G13 G14 G20

2 · Keep the default pull clean: files on each default branch that mention “experimental” (git grep -l -i experimental origin/HEAD), 2026-09-25: RAR 50 RAPP 45 rapp-workspace 26 rapp-hive-hub 19

rapp-installer 9 rapp-model-hive 8 hive-hub 6 lispy 1 rapp-1 0 rapp-work 0 Raw word hits, and some are legitimate, such as folder names: mentions, not problems. Run it again at lock time.

One front door: planned the installer README's “Start here” leads with the RAPP/1 LTS install (kody-w/rapp-installer#48, open) · planned every RAPP repo shows its earned RAPP/1 badge and a “Start here” link (PRs open in 13 of the stack's 15 repos) · experimental the drift sweep sets each status, and kody-w/rapp-hive-public publishes the portfolio: the RAPP/1 stack is 12 of 15 certified
